Description

taskit is a web application that allows users to create projects and develop tasks for each project. Users will be able to sign up for an account quickly. Once the account has been made, users can start creating their own projects right away.

Target Audience

taskit can be useful for most audiences; although, the application focuses mainly on everyday tasks. We do believe more female users ages 20 - 35 will be the main demographic since they have technology more accessible and tend to be more organized. However, males who are organized can find *taskit* useful as well.
